

InWE International Program

MISSION:

Following the mission of the Institute of Water and Environment (InWE), the International Program brings together academic, researcher, private, intergovernmental, governmental and non-governmental entities in the US and abroad to tackle regional, national and global water and environmental issues, through interdisciplinary research, education, capacity building and public engagement.

VISION:

To advance the knowledge needed to address water and environmental issues, both locally and globally, linking scholars, researcher, water professionals, decision-makers and stakeholders within international programs to foster water and environmental sustainability in the planet.

OBJECTIVES:

- Contribute to the development of joint academic programs integrating water science with social and cultural studies;
- Provide an interdisciplinary venue for applied research considering active citizenship and science as central elements for managing and preserving sustainable human and natural systems;
- Promote and foster international scientific cooperation and integrated scientific approaches to effectively manage and conserve water and environmental resources;
- Support and participate in global partnerships to bridge the science-policy interface;
- Facilitate knowledge sharing within the US and abroad.
